

SALES DATA ANALYSIS

Synent Technologies Data Science Internship

Student Name: Hardiksinh Mahida

Objective

The objective of this project is to analyze business performance using the Superstore Sales Dataset and generate insights from revenue trends, product sales, and profit analysis.

Dataset Information

Dataset Name: Superstore Sales Dataset

Source: Kaggle

Key Features:

- Order Date
- Sales
- Profit
- Product Name
- Category
- Sub-Category
- Region
- Quantity
- Methodology

The following analysis steps were performed:

- Loaded the dataset using Pandas
- Examined dataset structure and summary statistics
- Converted order dates into a suitable format
- Analyzed monthly revenue trends
- Identified top-selling products
- Evaluated profit by category
- Evaluated profit by region
- Generated business insights using visualizations
- Results

The analysis revealed the following:

- Revenue trends highlighted periods of business growth.
- Top-selling products contributed significantly to overall sales.
- Technology products generated substantial profits.

- Regional performance varied in terms of profitability.
- Category-level analysis provided insights into sales contribution.

Generated Visualizations:

- Monthly Revenue Trend
- Top 10 Selling Products Chart
- Profit by Category Chart
- Profit by Region Chart
- Sales Contribution by Category Pie Chart
- Conclusion

Sales Data Analysis provided valuable insights into business performance. The visualizations and analysis highlighted revenue trends, profitable categories, top-performing products, and regional performance, supporting data-driven business decisions.
